

Energy 21C Update  
23 June 2009

## Be at the knowledge edge of developments in the energy industry

Energy 21C, to be held at the new Melbourne Convention and Exhibition Centre from 6 to 9 September 2009, is the premier electricity and gas industry conference in the Southern Hemisphere.

The biennial conference this year will attract an estimated 2,000 delegates from around Australasia and the world to address the key themes of customers, climate change, networks and competencies.

Energy 21C will present eminent local and international speakers and industry leaders. They will explore asset management and technology issues that meet customer expectations for performance, not only in terms of reliable supply, but also in environmental sustainability benchmarks.

The conference will address future regulatory frameworks with a particular focus on best practice guidelines and reducing the carbon footprint.

Delegates will learn of latest developments in productivity, service provision and operations models.

A major conference stream will be dedicated to gas network growth, regulation, asset management and knowledge.

Energy 21C is a conference organised by industry for industry. As such, it will also focus on how to address the skills shortage in the industry along with vital training, health and safety issues.

Those attending Energy 21C will gain powerful insights into future trends and demands in the energy industry.

The conference integrates a series of keynote and panel presentations, workshops, live practical demonstrations, site visits, and a vast exhibition in the spectacular new facility in Melbourne.
